Challenge

Research the food journey of a traditional crop from Madagascar and create this food journey using relevant software packages.

Working individually, in pairs or as part of a team, discuss what will make your food journey successful. You may want to consider:

- What are the steps involved in the food journey?
- Which software is available for you to create the food journey?
- What information needs to be included?

The design process should involve:
- Researching the food journey
- List of the steps involved
- Consolidating this information as a whole class
- Determining the success criteria for your food journey
- Which software packages do you have available which you can use to make the food journey?
- Planning your design
- Creating your food journey using your selected software package
- Evaluating your food journey
